

Meeting Notes - 12/05 - Team Peanut Butter
Darius Bopp, Ron Dentinger, Nick Guo, Claudia Wu

Summary of Discussion:

- Demo run-through of MVP
 - Improvements to HomePage
 - Admin access to certain buttons in NavBar and Poll cards
 - Creating a Poll
 - Using snack bars to communicate errors
 - Viewing/Deleting Polls
 - Manage Admin
- Possible Demo ideas
- Whitelisted users in database, with one hardcoded admin
- Goals for final product
- Good UI except with the question input field

Advice:

- If question is longer than question input field, what happens?
 - Make it wrap
- Admin status
- User populations to polls
 - Too large of a scope
- Editing Polls: what is the envisioned behavior?
 - Possibly a lot of edge cases
 - Only allow changing poll names and dates
 - Maybe allow duplicate option to make another poll with the same information as the original
 - Editing question, ignore the original data and make another entry with the most updated votes
- UI to add/delete normal users for admin
 - Search bar to find one user
- Deal with situation if a MIT student tries to login that is not whitelisted
- How to show results of text-input options:
 - Load a CSV
 - Embed table into UI
 - Link to table
 - Sub window to scroll through results

Changes to Plan:

- Admin structure to be master admins rather than poll-specific admins
- No specific user populations anymore

Milestones Moving Forward:

- Support text-input options for a poll
- Minor changes:
 - Redirect to PollView after creating a poll
 - Load answer to already answered poll
 - Deleting self as admin
 - Opening/Closing polls
 - Sort results by number of votes
- Editing Polls
- Presentations
 - Make use of 4 mins to have explanation and demo
 - Get audience to participate, if possible
 - Everyone speak!
